PROFESSIONAL SUMMARY

Experienced QA Manager and Automation Specialist bringing over a decade of expertise in developing scalable test frameworks, implementing CI/CD pipelines, and leading QA strategy transformations. Specializing in Java-based automation solutions for web and mobile platforms. Demonstrable track record of reducing testing cycle times, improving quality metrics, and implementing "shift left" testing principles.

WORK HISTORY

Automation Test Engineer, 11/2024 – 01/26 - Contract
Autoventive

- Designed and implemented a scalable Selenium automation framework using BDD principles for web and mobile applications
- Developed Java Gradle-based Docker image with Chrome and ChromeDriver for optimized test execution within Dynamic Bitbucket Pipelines
- Automated regression test suite, reducing execution time while increasing critical business functionality coverage
- Led Android mobile automation implementation using Appium and Android Studio

QA Manager, 01/2022 – 02/2025
Gamma

- Spearheaded transition from manual to automated testing, achieving 30% reduction in testing cycle time and faster time-to-market
- Architected Java-based Selenium automation framework with Page Object Model, Cucumber and Jira Xray integration, reducing test maintenance by 25%
- Implemented "shift left" testing approach, improving dev-QA collaboration and reducing post-release defects by 15%
- Developed comprehensive test strategies aligned with organizational objectives
- Established QA standards, policies and procedures to ensure consistent quality

SKILLS

- Java, Selenium WebDriver, Cucumber/Gherkin, TestNG
- PlayWright
- Mobile Automation (Appium, Android Studio, SeeTest)
- Docker, CI/CD Pipeline Integration
- Page Object Model Design Pattern
- JavaScript, API Testing
- QA Process Improvement & Team Leadership
- JIRA, Xray, Bitbucket

EDUCATION

BSc (Hons), Computer Science, 2016
Manchester Metropolitan University

PROJECTS

Projects can all be found on my portfolio website https://yassermalik7.github.io/mym.github.io/

- Upskilled team through targeted training initiatives, increasing automation capabilities by 40%

Worldpay, Automation Test Analyst, 08/2020 - 12/2021

- Enhanced and maintained Java automation framework, reducing test execution time by 15%
- Contributed to continuous integration pipeline optimization
- Implemented robust test reporting mechanisms

Automation Test Analyst, 06/2018 - 07/2020

Barclays

- Leveraged JIRA API to build automation tools, reducing manual test management effort by 70%
- Maintained and improved mobile automation framework using SeeTest
- Managed core regression test packs, including execution, maintenance, and feature acceptance
- Provided technical automation support across feature teams

Java Developer, 09/2017 - 06/2018

KMP Digitata

- Developed web applications using Java, JavaScript, and JSP
- Created and documented RESTful and SOAP web services
- Implemented Selenium automation testing solutions
- Managed database operations and CI/CD processes

DevOps Engineer, 02/2017 - 09/2017

Thales UK

- Deployment of Software
- Assessing requirements for deliverables
- Software Configuration

Java Developer, 06/2016 - 12/2016

Tracsis, Stockport

- ADF Dashboards and widget creation
- JAR automatic deployments to Nexus ready to be used by Maven projects
- Leading UX feedback sessions
- Automation Selenium Testing
- Created selenium test environments
- Tests created as a core project to be used as ‘Plug and Play' with other projects
- Created selenium core framework
- Use of Docker and containers
- Test optimization
- Virtualization of tests
